

## NCFE CACHE LEVEL 2

# NEUROSCIENCE IN EARLY YEARS

Around 90% of brain growth occurs before the age of three. Self-regulation in the early years is a critical set of skills that help children to remain calm, attentive, and able to deal with their emotions. A knowledge of neuroscience can help early years practitioners to improve the development, health, behaviour and outcomes of the babies and children they work with.

**Please Note:** this is a Technical Specialist qualification; you should be employed in a relevant childcare setting to complete the knowledge requirements of this course.

## Benefits

- Achieve a nationally recognised Level 2 qualification
- Further your personal and professional development
- Be able to support individuals effectively
- Learn at a time that suits you without the need to attend college

## Modules

- Understanding neuroscience in early years
- Understanding self-regulation and how to nurture this in children from birth to seven years

**Immediate start online, with expert tutor support**

**Complete around your schedule, over 7 weeks**

**Available fully funded, subject to eligibility**

*Additional eligibility requirements may apply, based on your location; contact your Client Engagement Advisor for more details. If you enrol but do not submit your work, or wish to withdraw early from your course, you may be subject to a £125 cancellation fee*
